

WHAT IS CLAIMED IS:

1. A fusible link unit comprising:

a fuse circuit structure including a plurality of terminal parts linked through fusible members to a linking plate, and

5 a housing into which the fuse circuit structure is assembled,

wherein the fuse circuit structure is formed by laminating a plurality of part plates,

a first part plate includes a first linking portion  
10 constituting the linking plate by being laminated by a second linking portion of a second part plate, and

a respective part of the plurality of terminal parts which are connected to the linking plate with a respective part of the fusible members are provided with the first part plate.

15

2. A fusible link unit according to claim 1, wherein the first part plate and the second part plate have substantially identical number of the terminal parts to each other.

20 3. A fusible link unit according to claim 1, wherein the number of the part plates is two.
